ARCHIVIERUNG

Readily available patient records – anywhere, any time

Requirements change – responsibility remains

Safety and privacy for sensitive data

Requirements change – responsibility remains

DMI takes responsibility for the digital archiving of patient records and presentation in client software systems. Since 1966, the specialized service provider has been providing hospitals with continuous support in the optimization of information-based processes and with fully compliant archiving throughout constant changes in technologies and surrounding conditions. In production centres and at clients' locations, DMI staff digitize, qualify, integrate, and archive every second patient record in Germany for in-patients based on certified information safety and data privacy guidelines, and ensure seamless integration into health IT systems. Through its expertise in interfacing with all data management HIS architectures, DMI enables the consolidation of digitized paper-based patient re-

ords with electronic documents and data, as well as medical image documentation, in audit-proof long-term archives. Interoperability (the ability of systems to interact with one another), including at the granular level of data, is the basis for the integration and sustainability of our solutions.

DMI provides its clients with lean, secure, efficient processes through consolidated patient records.

Our relationships with our clients are shaped by commitment, respect, and fairness. The quality of our service business is based on the professional and social skills of our employees.

Services

Consulting/compliance

- Process analytics and consulting
- Process documentation

Systems and services

- Archiving management system AVP (Version 8) as a documentation management and archiving solution for healthcare
- DMI connector for archiving electronic documents and images
- Interfaces with PDM, HIS, DMS

Digitization

- Record collection service
- External and in-house scanning service
- Overall process monitoring and reporting

Audit services and long-term archiving (p/e/iDPaaS)

- Long-term digital archiving safeguarding probative value of records
- Digital signature and encryption services
- Certified data centre
- WORM storage with regular migration of storage technology

Qualification

- Medical documentation services
- Document type identification (automated)
- Mapping against consolidated document list (standard)
- Qualification of records and documents

Expertise

Organizational security and compliance

- Integrated quality and data security system (TÜV-certified in accordance with DIN ISO 9001)
- Data centre (certified by eco – Association of the Internet Industry)
- Replacement scanning (certified by the German Federal Office for Information Security (BSI) in accordance with TR 03138 RESISCAN)
- Information security management system (TÜV-certified in accordance with ISO/IEC 27001)
- GCP-compliant processing of trial records

Association work and interoperability initiatives

- Work group on the archiving of patient records for bvitg (member since founded)
- CCESigG (founding member)
- DVMD (board)
- Entscheiderfabrik (projects and feedback)
- VKD (sustainable partner, medical and information technology)

Facts and figures

- Archiving patient records since 1966
- More than 1,000 clients, including more than 800 hospitals in Germany
- More than 1,000 staff based at three locations
- More than 55 local service units
- Two service centres
- Fail-safe data centres
- More than ten million patient records digitized and archived annually
- Secure conventional archive of 720,000 metres
- More than 500 sFTP links to clients
